# About me

**Shuhei Hashimoto**

橋本 周平

Relationship LLC

Managing Partner / Head of LOGOTORU

- **Background**

Recruit → Salesforce → startup. Career centered on enterprise BDR / outbound.

- **Track record**

18 consecutive months of hitting KPIs at a U.S.-headquartered company. Built a 20-person inside sales org; secured 50+ meetings with executive decision makers per year at publicly listed enterprise tier.

- **Why I founded LOGOTORU**

I repeatedly saw enterprise outbound motions exhaust the market faster than expected. The need to make continue / stop decisions on data — not gut feel — is why LOGOTORU exists.

# "Push harder" is always said. No one is empowered to say, "Stop here."

Enterprise outbound is structured to only step on the accelerator. Stop/pullback decisions are run on instinct — and by the time you notice, you've burned the market itself.

## No threshold and no authority to say "stop"

You can't explain a pullback in numbers, so you can't stop. Continue / adjust / stop is gut-feel; replace the person, replace the answer.

## You keep pushing a market that no longer responds

Prospects fatigue; brand impression erodes. A burned market does not come back.

## When to pull back is never recorded

When, where, and why the market started to slip — no one can explain. The decision history simply doesn't exist.

# The list is finite. There is no replacement.

Of all Japanese corporations, the enterprise tier (publicly listed enterprise tier) is a tiny minority.

## CRITICAL RISK

### List exhaustion is irreversible

Unlike SMB, **once the list is exhausted you cannot just "buy the next list".**

Once a market is lost, that market disappears.

5%

**Recovery rate to positive sentiment** — the structural mark of irreversible market burnout

# | Sloppy outbound burns the market — for good

"Sloppy approach" accumulates negative sentiment and becomes **irreversible (recovery to positive sentiment: 5%)**

## High-volume activity without strategy

"Spray and pray" tactics / low-quality talk tracks

STEP 1

## Negative sentiment accumulates

"Pushy" and "annoying" brand impressions stack across the market

STEP 2

## Locked out of the market

For years afterward, you can no longer approach that market — an irreversible state

STEP 3

# Are you watching the leading indicators of burnout?

Abstracted from cross-client data — a rise in negative response rate is consistently followed, 3 months later, by a drop in effective conversation rate.

**"This month's negative rate" already determines "the conversation rate 3 months from now".**

By the time meeting count or revenue drops, it's too late. The market is already gone.

# What LOGOTORU is

**OS** A decision operating system that lets enterprise outbound teams explain "**continue / adjust / stop**"

## WHAT WE DON'T DO

- ✗ **We do not declare the "right answer"**  
Calling the "correct answer" for a market or industry is not our role
- ✗ **We do not predict the future**  
No demand forecasting model, no probability distribution
- ✗ **We do not make the decision for you**  
Final decision is the executive's. LOGOTORU supplies the evidence
- ✗ **We do not guarantee meeting count**  
Maximizing decision quality — not meeting count — is the goal

## WHAT WE DO (CORE VALUE)

- 01 Assemble the facts (logs) needed for decisions**  
Not fragmented activity history — structured data shaped for decision-making.
- 02 Preserve the reasoning over time**  
Hypothesis → response → interpretation → decision. We save the "why we thought so" context.
- 03 Make decisions auditable in hindsight**  
Not outcome-only reporting — verify whether the decision was sound at the time it was made.

# Why we can do this

## DATA FOUNDATION

A proprietary data foundation **built for enterprise outbound** (60+ indicators in composite analysis)

We structure the qualitative data — conversation analytics and more — that traditional SFA/CRM cannot capture, and deliver it as a decision-making dashboard.

## Market Pivot

Monthly Report

自社データで診断する +

# An audit trail of decisions you can explain to the board

Through the monthly report and the decision-log timeline, the rationale behind every call is preserved.

REPORT — Monthly report

## Ask "should we continue?" every month

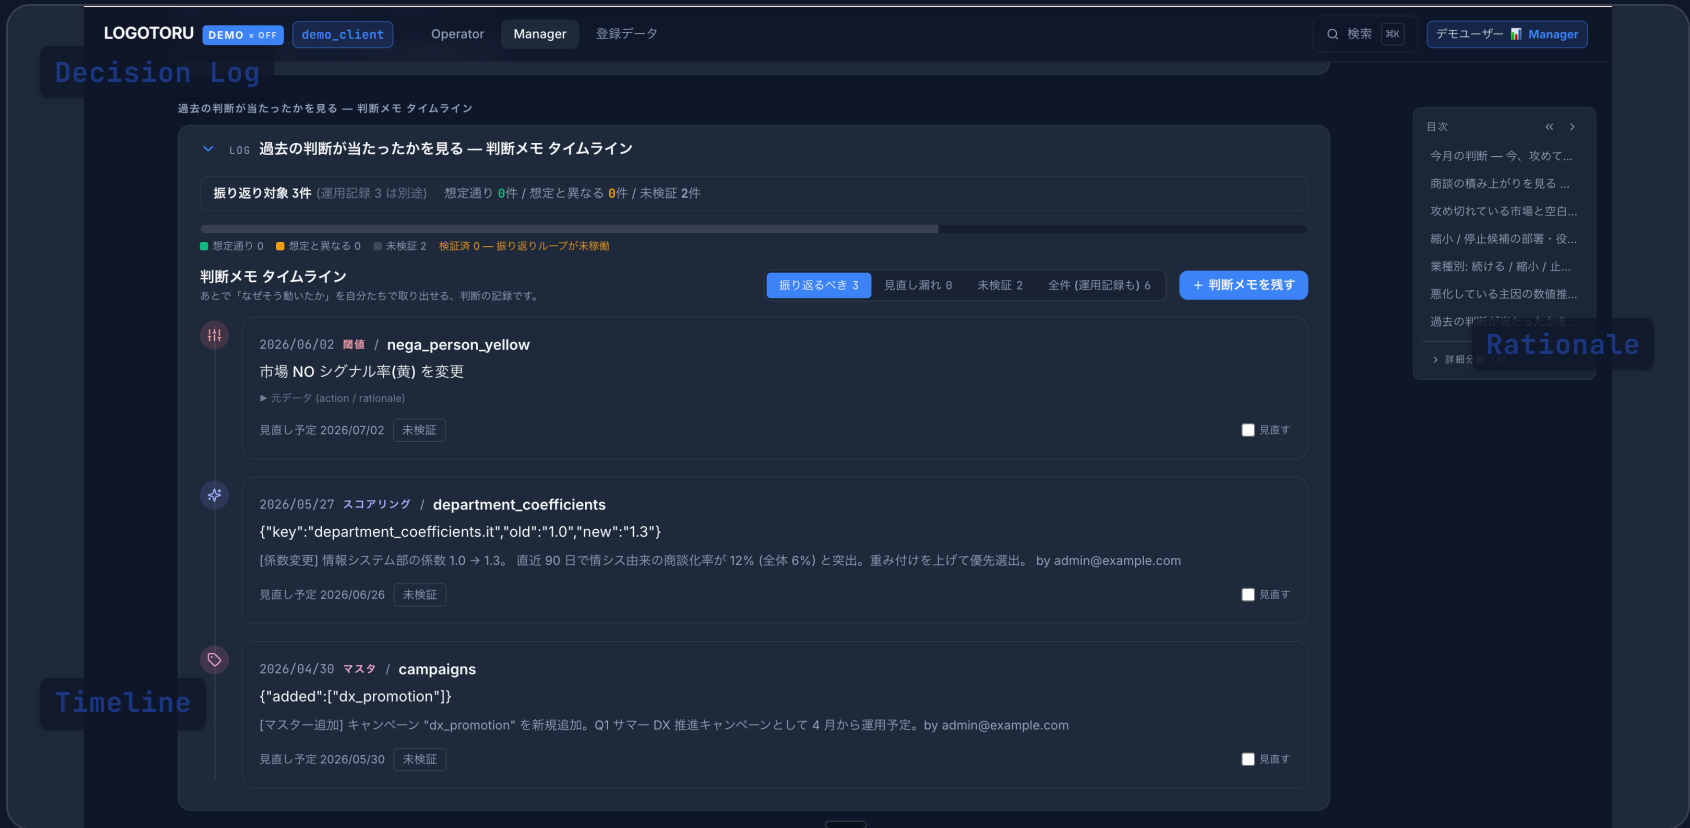

Verdict, drivers, and next action on one page — board-ready quality.

TIMELINE — Decision log

## Why each move was made is preserved

Threshold changes, coefficient updates, master additions — every decision recorded in chronological order.

"Should we keep investing in this BDR motion?" — answered every month, in writing.

Paired with the decision log, accountability is preserved and recoverable on demand.

# What you can say after 6 months

## DELIVERABLES — Decision foundation in hand by month 6

### Market health benchmarks

Effective conversation rate, negative response rate, accumulation rate, residual rate — calibrated per industry

### Market recovery rate

Measure how often once-negative prospects return to positive — quantify market elasticity

### Validity of BDR investment

ROI computed from market health score and list-lifetime forecast

### Winning patterns by industry / role

A/B test results turned into language for messaging, list, and role targeting

### Explain to your boss with the decision report

A reason set for continue / stop / adjust

## DECISIONS — Decisions you can make by month 6

### CONTINUE

続ける

Able to explain "why we continue" in numbers and logic

### ADJUST

変える

Able to articulate what to change — list, script, or target

### STOP

止める

Able to explain "why we stop now" against a defined exit threshold

Not just outcomes (meetings or revenue) — **accountability for the decisions themselves**, built in 6 months.

# Observation-driven execution for a decision OS

Not sales outsourcing — observation-driven execution as a decision OS. The 4 dimensions we deliver.

## TEAM DESIGN

### Execution and decision-making are not separated

→ Raw signal flows straight into the decision

The founder, Hashimoto, directs every engagement personally. Execution and decision-making are never split. Operator is fixed (1 person per account) to maximize learning curve.

## OBSERVATION DESIGN

### Execution designed to capture observation data

→ "Channels that work / channels that do not" become identifiable

In STANDARD, call and email (within LOGOTORU OS) are the observation channels, and we identify "which contact point works" by industry, department, and role. Letter / LinkedIn and other additional channels are quoted separately.

## POPULATION DEFINITION

### Define the market population required for decision-making

→ "Who to reach" is structured by name

Using public personnel data, we define the decision-maker universe across industry × role × company size, and structure it down to named individuals.

## DECISION REPORT

### Ask every month: should BDR investment continue?

→ Continue / exit, explainable to the board

Every month we report whether to keep investing in this BDR motion. Continue / stop / adjust — reported at board-ready quality.

# Scope and pricing

## PROVIDED — 3-piece bundle

### Decision OS design

Metric definitions, threshold design, dashboard build (LOGOTORU OS). Configured to your continue / stop criteria.

### Monthly decision review

Continue / stop / adjust rationales structured; the basis for the decision made explicit. Board-meeting-ready quality.

### Observation execution (BDR)

Observation across call and email (within LOGOTORU OS), with response classification and log entry — under the founder's direction. Letter / LinkedIn and other additional channels are quoted separately.

### LOGOTORU is not a sales outsourcing vendor.

It is a decision OS to minimize the loss from misjudgment.

## PRICING

MONTHLY

# ¥1M+

(excluding tax, approx. US\$6.5K)

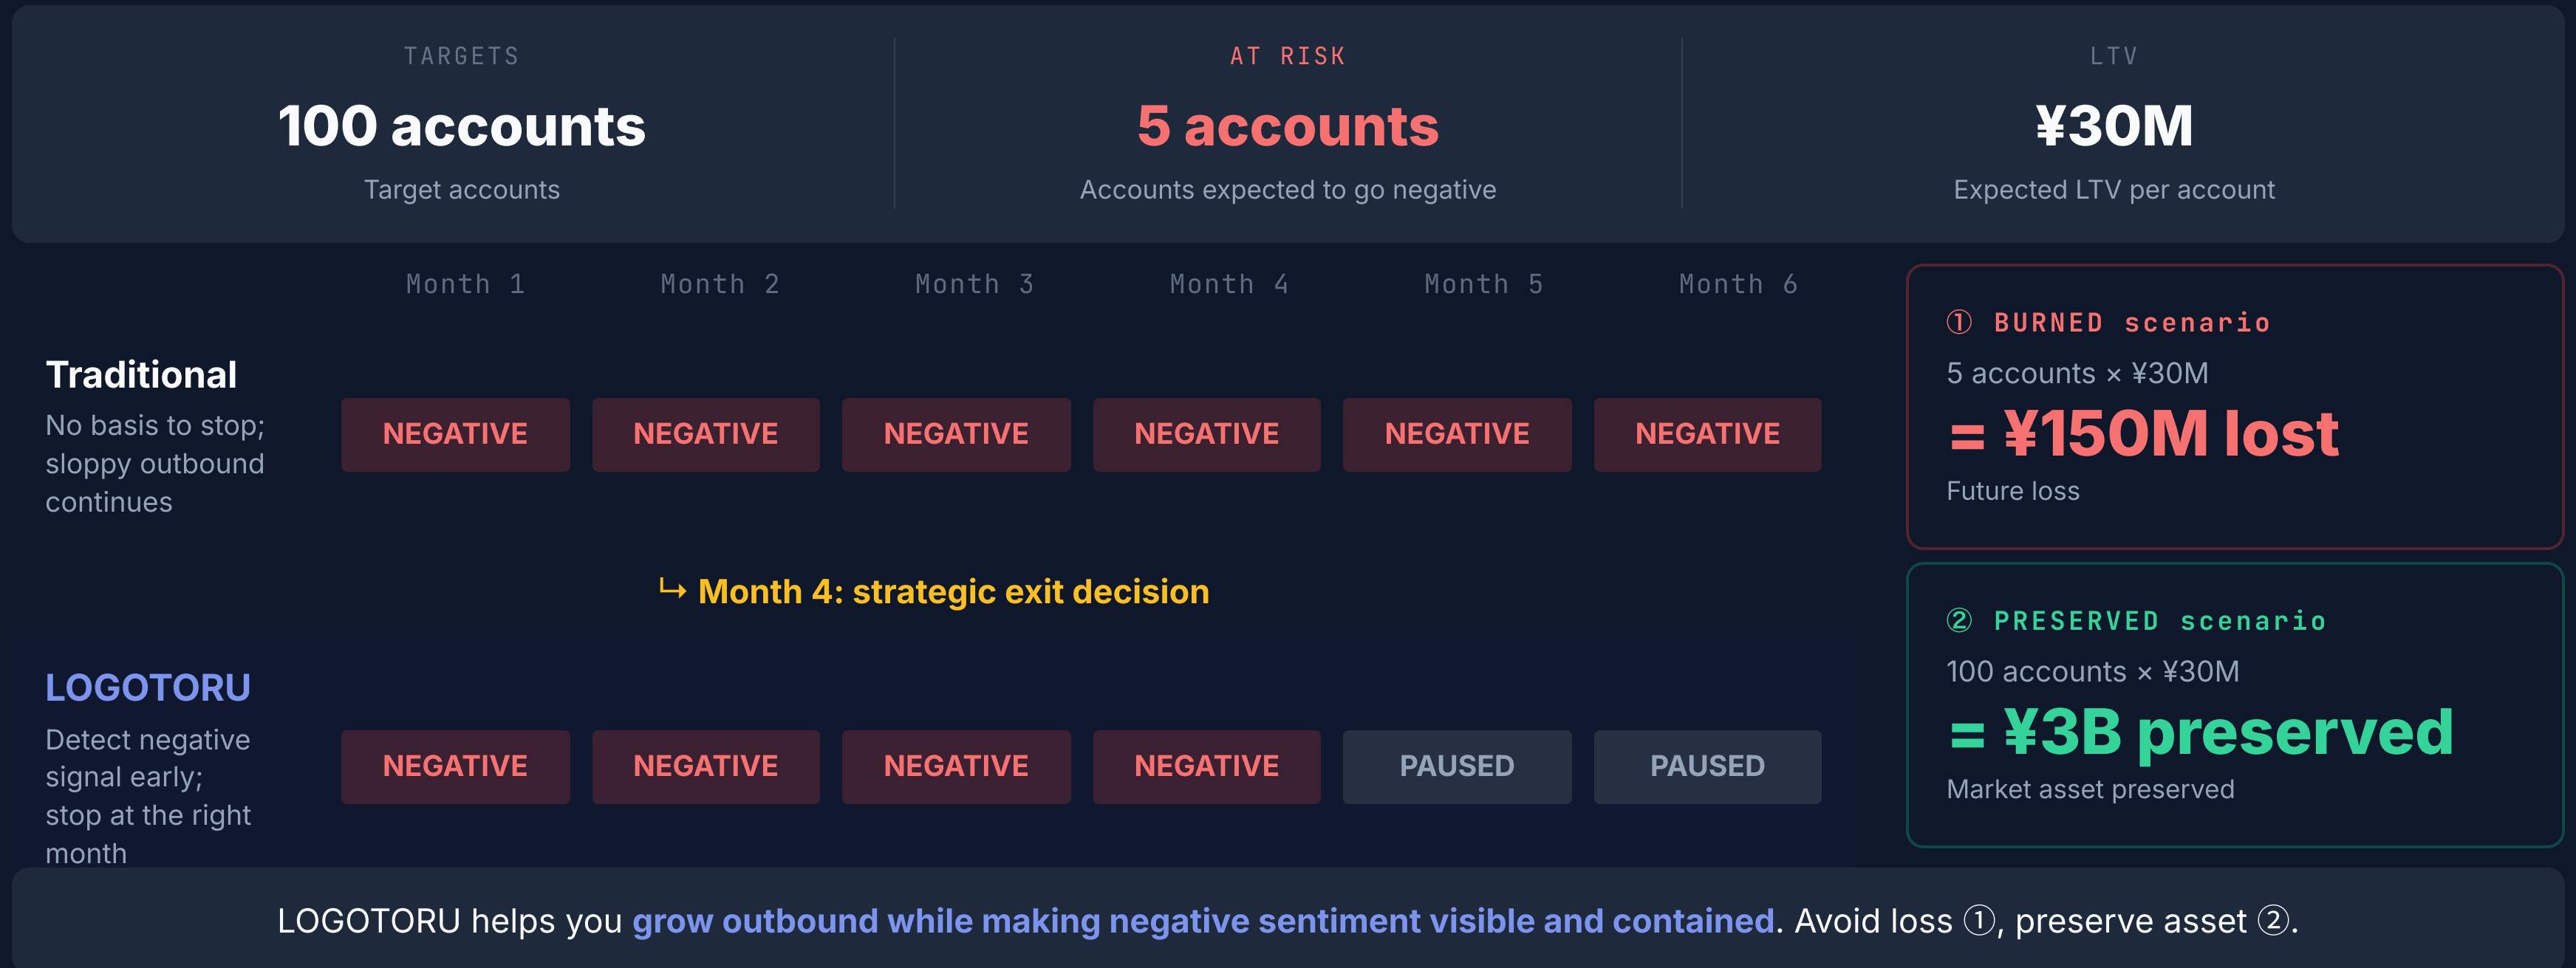

Scope drivers: account universe / monthly approach volume / industries / channels / reporting lines

**6-month minimum (cancellable from month 7 with 1-month notice)**

**Zero setup fee:** Start on the monthly plan alone (data design & import support included). Optional standalone packages if you want evidence first: (1) Market Health Report (¥500K) / (2) Decision-Maker List (¥500K) — fully credited toward the monthly plan if started within 60 days of completion

Decision OS + Monthly Review + Observation Execution  
— all 3 included

# The biggest ROI is protecting the future target-account list

\* Illustrative computation: LTV ¥30M, 5/100 accounts going negative. Actual values vary by customer.

# Customer voices / track record

Track record concentrated in high-ACV services (ARR ¥10M / ~\$65K+). Validated patterns specifically in enterprise BDR.

## 2x meeting count

EdTech

→ **Decision-maker approach now an internal asset**

“The "decision-maker approach playbook" now lives as an internal asset. Sales tends to be personality-driven, but we now have real repeatability.

**Lifeistech**

Ms. Ichikawa / DX Division

## 60% qualified-meeting rate

SaaS

→ **Quality meetings at the C-suite level**

“Not forced meetings — customers come having understood the service and prepared questions. The mix of senior-level meetings, including executive officers, has been notably high.

**Xbit**

Mr. Kawai / CBO

## ~5x meeting conversion

Legal Tech

→ **Deep understanding and interest before the meeting**

“By the time we enter the meeting, the prospect already has significant understanding and interest. Compared to traditional cold calling, we have achieved roughly 5x the meeting acquisition rate.

**Legalscape**

Mr. Kaneko / Business Strategy

## 6-month KPI in 3 months

Cybersecurity

→ **TSE Prime, Division-Head class meetings secured**

“A meeting-acquisition KPI originally planned over 6 months was hit in just 3. The majority of meetings were with division-head class or above at TSE Prime-listed companies.

**Forcepoint Japan**

Mr. Fumiya / Head of Japan Sales

## 9 meetings in month 1

Sales Consulting

→ **Customized letters expanded our own offering**

“In just one month of operation, 9 enterprise meetings. The customized letters — one by one — were so high-quality that our own sales-support offering itself expanded.

**ORIT**

Mr. Ishikawa / CEO

Customers and partners

# Comparison with alternatives

LOGOTORU occupies the position "log capture + decision support, unified." Clearly differentiated from meeting-count outsourcing and from internal BI upgrades.

| Dimension                 | In-house log capture                   | BI / CRM upgrade                   | Generic sales outsourcing | LOGOTORU                                               |
|---------------------------|----------------------------------------|------------------------------------|---------------------------|--------------------------------------------------------|
| Decision log accumulation | ✗ Collapses (person-dependent)         | △ Separate design needed           | ✗ Not preserved           | ◎ Bundled in                                           |
| "Stop" decision           | ✗ Threshold is personal                | △ Slow (analysis request)          | ✗ Generally not done      | ◎ Reported every month                                 |
| Observation data quality  | ✗ Varies wildly by rep                 | △ SFA data only                    | ✗ Count-focused           | ◎ 60+ indicators, composite                            |
| BDR execution             | ○ In-house resources                   | ✗ No involvement                   | ◎ Volume-focused          | ○ Multi-channel / strategic                            |
| Decision-maker list       | △ Manual updates                       | ✗ None                             | △ Targets only            | ◎ By-name provision                                    |
| Board-report suitability  | △ Person-dependent reports             | △ Dashboards only                  | ✗ Meeting-count report    | ◎ Reasoning fully articulated                          |
| Time to ramp              | Months+                                | Half-year+                         | Instant–2 weeks           | 2–4 weeks                                              |
| Cost                      | Headcount (hidden)                     | BI build + headcount               | ¥300–800K / mo            | ¥1M+ / mo (~\$6.5K USD)                                |
| Best fit                  | Strong ops culture + dedicated experts | Mature data stack + analytics team | Just need volume          | Heavy decision accountability — must explain decisions |

# FAQ

## **Q. Won't bringing in an external party demoralize our in-house BDR team?**

A. The opposite. LOGOTORU exists to show "doing more under these conditions is a business loss." We bring it in to free your team from inefficient activity.

## **Q. ¥1M/mo is expensive. Aren't trade shows or ads better?**

A. There is no setup fee. If the monthly retainer helps you identify the right moment to stop early, you avoid tens of millions to hundreds of millions of yen in subsequent loss. This is not a one-off campaign spend — it is infrastructure that improves the efficiency of your entire marketing budget.

## **Q. Couldn't we just enforce log entry on our internal BDR team and analyze it ourselves?**

A. Theoretically yes. Practically very difficult — psychologically and structurally. Asking the people doing the work to objectively record "data that may reduce the need for their activity" carries a powerful bias.

## **Q. If we end up deciding to exit, isn't the BDR investment wasted?**

A. On the contrary — it's the biggest return (loss avoidance). The tens of millions to hundreds of millions of yen in losses from hesitant continuation can be locked in and stopped. This "cutting losses" is itself one of the executive wins.

## **Q. Won't aggressive BDR execution come across as pushy and damage the brand?**

A. Making that exact risk visible and controlling it is the essence of LOGOTORU. We continuously measure the "negative-sentiment accumulation rate (the market's aversion)" and advise to stop the moment brand-damage signals appear.

## **Q. We're not at the tightly-managed phase yet. Can we just wait and see?**

A. Have you defined the deadline for "wait and see" and the criteria for the decision at that point? Continuing without those is not strategic patience — it is decision deferral.

LOGOTORU does not promise success.

What it does is make the decision — "continue with confidence when metrics are within thresholds, exit openly when they are not" — explainable in data.
